INTERNAL USE ONLY

Noggin Business Continuity

Consolidated Demo Flow and Sales Playbook

One persona, one story, seventeen stops. Built for sales to deliver a high level BCM overview in 30 to 45 minutes, with GCC tailoring.

Item	Detail
Based on	Demo Script Playbook, Business Continuity (Amy Berridge, June 2026)
Consolidated by	Anas Aljarrah, Pre-Sales, UAE, KSA and Qatar
Version	October 2026, v2.0 draft
Environment	Product supported regional demo site (EMEA). BC Manager profile.
Screenshots	Framed placeholders. Capture from the live tenant before external use.

Contents

#	Section	Page
1	The Story in One Page: persona, six acts, five proof moments	3
2	Navigation Map: left nav as the BCM lifecycle	4
3	Before You Start: guardrails, profiles, pre-demo checklist	5
4	The Demo Flow, Stop by Stop (17 stops with screenshots)	6
5	Run Sheets by Time Slot: 20, 30 and 45 minutes	15
6	Tailor It to the Room: GCC regulators and past engagements	16
7	Objections and Competitive Lines	17
8	Screenshot Capture List	18

1. The Story in One Page

The rule of the demo. Tell one story about one person. Every click answers a question that person would actually ask.

Meet your user: Sara

Persona	Detail
Who	Sara Al Mansoori, Head of Business Continuity at a UAE regulated bank (swap the sector to match the room).
Her world today	40 BIAs in Excel, plans in Word, an annual BCP pack copied by hand, and an audit next quarter.
Her regulators	CBUAE operational risk and BCM expectations, NCEMA 7000:2021, ISO 22301:2019 certification target.
What keeps her up	"If the data centre goes down tonight, I cannot prove which P1 services recover in time."
What she must walk away believing	Noggin keeps BCM data live, finds her gaps automatically, and gives her board and auditor proof.

Six acts, seventeen stops

Act	Sara's question	Where we go	Stops
1	Are we ready right now?	Home and Program Status	1
2	What really matters and what does it depend on?	BIAs and Business Operations	2 to 8
3	Do we have a plan, and is it current?	Plans and BCPs	9 to 12
4	Would it actually work?	What-if? Scenarios	13
5	How do I run and report the programme?	Analytics, Tasks, Registers, Risks	14 to 16
6	Will my executives and champions use it?	Profile views and close	17

The five proof moments to land

If you only have 20 minutes, these five moments carry the deal.

1. **Auto MTPD and priority.** Impact ratings produce MTPD and a P1 to P4 priority with no manual maths (Stop 4).
2. **RTO breach flag.** An RTO longer than MTPD is flagged on the dashboard the moment it is typed (Stop 4).
3. **Unaccepted gap to Program Status.** A Vulnerable, not accepted gap appears on the home board instantly (Stop 5).
4. **BCP generates itself.** Scope by unit, site or operations and the BCP is built from live data (Stop 11).
5. **Digital stress test.** A What-if scenario lists every RTO and MTPD breached in seconds (Stop 13).

2. Navigation Map

The left nav is the storyline. Walk it top to bottom and you tell the BCM lifecycle in order: understand, plan, test, run, report.

Left nav item	Lifecycle stage	Key tabs and buttons to click
Home	Status	My Work, Program Status
BIAs	Understand	Status widgets, BIA Guide, Send BIA for Approval
Business Operations	Understand	Guide steps: Map Resources, Evaluate Risks, Assess Impacts, Define Recovery Requirements, Gap Analysis; Tasks, Relationships, History; P1 widget
Plans	Plan	Create Plan, Plan Execution tab, Tasks, Dependencies, Send Plan for Approval
BCPs	Plan	Create BCP (Scope), Generate BCP, Send BCP for Approval, Version Tracking, Ad-hoc Printing
What-if? Scenarios	Test	Create What-if? Scenario, Recovery Threshold Breaches, Recovery Gaps, Tasks
Exercises and Incidents	Test and respond	Position only in a BCM overview. Demo in a crisis or incident session.
Analytics	Report	Trend charts
Tasks	Run	Status, priority and type breakdown
Registers (Resources, Sites) and Risks	Foundation	Equipment or Vendors, Risk record blast radius
Profile selector	Adoption	BC Manager, BC Executive, BC Champion, BC Contributor

Lifecycle in one line

Status	Understand	Plan	Test	Run	Report
Home	BIAs, Operations	Plans, BCPs	What-if	Tasks, Registers	Analytics, Profiles

3. Before You Start

Four guardrails

1. **No Admin profile.** Demo as BC Manager. Admin buttons make the platform look complex to non-technical buyers.
2. **Left nav is the storyteller.** Move down the sidebar in order, never jump around to hunt for records.
3. **Asterisk rule.** Only open records marked *. They are seeded with rich data, so no empty screens.
4. **Product supported sites only.** Use the EMEA, NA or APAC regional demo sites. One-off tenants miss feature updates.

> **Profile choice by audience**
> **Most clients.** BC Manager, BC Champion, BC Executive, BC Contributor.
> **Regulated financial institutions only.** Use the combined BC & OpsRes profiles when Important Business Services, plausible scenarios and impact tolerances matter (CBUAE, SAMA, QCB, CBO regulated banks).

Pre-demo checklist (night before)

✔	Check
☐	Logged in as BC Manager on the regional demo site, session tested.
☐	Every * record opens and every widget shows data.
☐	One BIA ready to send for approval, one operation ready for the RTO breach moment.
☐	What-if scenario pre-generated with the sector scenario you will talk to.
☐	Resource examples and scenario renamed to the prospect's industry where you can do it additively.
☐	Profile switch to BC Executive and BC Champion tested.
☐	The client's single most important test case walked through once end to end.

4. The Demo Flow, Stop by Stop

Each stop gives the click path, what Sara sees, one line to say, and the proof point. The talk track and tips are there if you need them.

Stop 1 · Home Page and Program Status

Act 1 · Wake up to the truth

Click path	Log in as BC Manager → Home → My Work tab → Program Status tab
What Sara sees	Her own tasks and approvals, then a live health check of the whole BCM programme: overdue BIAs, plans needing reassessment, unaccepted vulnerabilities.
Say this (one line)	"The moment you log in, you know if the programme is ready. No spreadsheet, no chasing."
Proof point to land	Every red flag on this board was raised automatically by a rule, not typed by a person.

Talk track

- **Everyone gets their own view.** A department head who logs in twice a year sees only their tasks and approvals.
- **Program Status is the board pack.** Overdue, reassessment required and unaccepted gaps are pulled in automatically.
- **Plant the hook.** "Remember this board, everything we do next feeds it."

SCREENSHOT 01 · Home Page and Program Status

Capture: Program Status tab with at least one red flag visible (Overdue or Unaccepted vulnerability).

Stop 2 · BIA Global Dashboard

Act 2 · Understand the business (BIA)

Click path	Left nav → BIAs
What Sara sees	Metric highlight widgets at the top: In Progress, Pending Approval, Approved. Click any widget to drill into the list.
Say this (one line)	"One source of truth for every BIA in the company, clickable by status."
Proof point to land	Click the Pending Approval widget live. The list filters instantly.

Talk track

- **Name the pain.** BIAs normally live in 40 disconnected spreadsheets owned by 40 people.
- **Show the drill down.** One click on a status widget isolates exactly who is behind.

SCREENSHOT 02 · BIA Global Dashboard

Capture: BIAs dashboard with the three status widgets populated.

Stop 3 · BIA Workspace and Business Operations

Act 2 · Understand the business (BIA)

Click path	BIAs → open a BIA marked * → BIA Guide on the dashboard
What Sara sees	Scope, owner and due date for the BIA, plus the Business Operations under it (products and services, processes, activities).
Say this (one line)	"Every department collects BIA data the same way, using the BCI GPG 7.0 structure."
Proof point to land	Adding a new operation to an Approved BIA flips it back to In Progress automatically. The data cannot go stale.

Talk track

- **GPG 7.0 alignment.** Products and services (what you deliver), processes (how), activities (the daily work). Pick the depth that fits maturity.
- **Linkage.** A process or activity declares which product or service it supports, so the dependency chain runs top down.

Field tip

Buyer is a bank? Say "products and services" map neatly to Important Business Services under operational resilience rules.

SCREENSHOT 03 · BIA Workspace and Business Operations

*Capture: A * BIA workspace showing the Business Operations list and the BIA Guide.*

Stop 4 · Inside a Business Operation: the five step Guide

Act 2 · Understand the business (BIA)

Click path	Inside the BIA → open a Business Operation marked * → Guide on the left
What Sara sees	Guided steps: Map Resources, Evaluate Risks, Assess Impacts, Define Recovery Requirements, then Gap Analysis. Each form has User Guidance at the top.
Say this (one line)	"Your department managers need zero training. The form tells them what to do."
Proof point to land	MTPD is calculated from the impact ratings and mapped to a P1 to P4 Business Priority on screen.

Talk track

- **Map Resources.** Select Yes against IT systems, sites, vendors and equipment from central registers. No free text.
- **Evaluate Risks.** Link enterprise risks and call out single points of failure, at operation, resource or vendor level.
- **Assess Impacts.** Financial, reputational and operational impact over time. Tick Show Matrix for the rating guide.
- **Recovery Requirements.** MTPD auto-calculates. User sets RTO, RPO and MBCO with tooltips, then links recovery plans.
- **The killer moment.** Enter an RTO longer than the MTPD. The platform flags an alignment breach on the monitoring dashboard.

> **Field tip**
> **Resources to name by sector.** Bank: core banking, SWIFT, card switch. Energy: DCS/SCADA, control room, OEM vendors. Government: e-services portal, UAE PASS integration, data centre.

SCREENSHOT 04 · Inside a Business Operation: the five step Guide

Capture: Recovery Requirements form showing calculated MTPD and Business Priority P1.

Stop 5 · Gap Analysis and the accountability loop

Act 2 · Understand the business (BIA)

Click path	Same form → scroll to Gap Analysis
What Sara sees	Rating of Vulnerable, Resilient or Over-resilient. If Vulnerable, the question "Is this risk accepted by the organisation?"
Say this (one line)	"Noggin finds where you overspend and where you are exposed."
Proof point to land	Answer No on risk acceptance and save. Go back to Program Status: the unaccepted vulnerability is now there.

Talk track

- **Over-resilient saves money.** Instant failover on a P4 process that can be down a week is budget to reallocate.
- **Vulnerable creates a loop.** Not accepted means it sits on Program Status until a task closes it.

SCREENSHOT 05 · Gap Analysis and the accountability loop

Capture: Gap Analysis section with Vulnerable selected and the risk acceptance question shown.

Stop 6 · Operation dashboard: Tasks, Relationships, History

Act 2 · Understand the business (BIA)

Click path	Close the form → Business Operation dashboard → Tasks tab → Relationships tab → History tab → breadcrumbs back
What Sara sees	All entered data aggregated in one view, remediation tasks in context, a dependency map, and a full audit history with attachments.
Say this (one line)	"Click Relationships and you see the blast radius if one vendor goes down."
Proof point to land	The Relationships visual showing the operation connected to systems, sites and vendors.

Talk track

- **Tasks.** Assign the fix for the gap to a named owner with a due date, right here.
- **Relationships.** How one asset or vendor failure ripples through the business.
- **History.** Every change logged for audit. Breadcrumbs mean casual users never get lost.

SCREENSHOT 06 · Operation dashboard: Tasks, Relationships, History

*Capture: Relationships tab dependency visual for the * operation.*

Stop 7 · BIA approval and annual lifecycle

Act 2 · Understand the business (BIA)

Click path	Breadcrumbs → BIA → hover then click Send BIA for Approval
What Sara sees	Approval request sent by email with a direct link. Approver can approve or request revisions.
Say this (one line)	"Approval, reassessment and overdue chasing are all automatic."
Proof point to land	At 11 months: Reassessment Required plus email. At 12 months: Overdue. Both appear on Program Status.

SCREENSHOT 07 · BIA approval and annual lifecycle

Capture: Send BIA for Approval button on the BIA dashboard.

Stop 8 · Global Business Operations Register

Act 2 · Understand the business (BIA)

Click path	Left nav → Business Operations → click the P1 widget

What Sara sees	Every operation across the enterprise with priority widgets.
Say this (one line)	"If the CEO asks what we protect first, this is the answer in one click."
Proof point to land	Click P1 and the list reduces to the critical operations company wide.

SCREENSHOT 08 · Global Business Operations Register

Capture: Business Operations register filtered to P1.

Stop 9 · Plan Register and Create Plan

Act 3 · Prepare the response (Plans and BCP)

Click path	Left nav → Plans → point to plan types → Create Plan → Plan Execution tab
What Sara sees	Standardised plans (crisis, operational, IT DR) with status widgets. The form covers Purpose, Scope, Communication, Testing Status, then Plan Execution: Activation Authority, Response Team, linked response plans and checklists.
Say this (one line)	"One template for every department, and one plan can serve many operations."
Proof point to land	Plan Execution defines who can activate, who responds, and the live checklists they tick during an incident.

SCREENSHOT 09 · Plan Register and Create Plan

Capture: Plan form open on the Plan Execution tab.

Stop 10 · Plan workspace: Tasks, Dependencies, Approval

Act 3 · Prepare the response (Plans and BCP)

Click path	Exit form → open a plan marked * → Tasks tab → Dependencies tab → hover Send Plan for Approval
What Sara sees	Plan maintenance tasks, and the automatic roll up of which operations, vendors and resources rely on this plan.
Say this (one line)	"If a vendor fails tomorrow, you know which plan to trigger. No searching."
Proof point to land	Dependencies tab lists the operations that link to this plan, populated automatically from the BIA step.

SCREENSHOT 10 · Plan workspace: Tasks, Dependencies, Approval

*Capture: Dependencies tab of a * plan.*

Stop 11 · BCP: the live roll up

Act 3 · Prepare the response (Plans and BCP)

Click path	Left nav → BCPs → Create BCP (show scope options) → exit → open a BCP marked *
What Sara sees	Scope by Organisational Unit, Site or selected Business Operations. Generate BCP pulls every dependency, risk and procedure into a workspace.
Say this (one line)	"Your BCP writes itself from data you already maintain, and it stays live."
Proof point to land	Change an underlying operation and it ripples into the BCP in real time.

SCREENSHOT 11 · BCP: the live roll up

Capture: Create BCP form with Scope field options visible.

Stop 12 · BCP approval, Version Tracking and printing

Act 3 · Prepare the response (Plans and BCP)

Click path	BCP dashboard → hover Send BCP for Approval → Version Tracking tab → Ad-hoc Printing icon
What Sara sees	Approved versions frozen as un-editable PDFs, plus on-demand branded Word or PDF output.
Say this (one line)	"Live data for operations, a frozen record for the auditor."
Proof point to land	Open one Version Tracking entry and show the approved PDF.

SCREENSHOT 12 · BCP approval, Version Tracking and printing

Capture: Version Tracking tab with at least one approved PDF entry.

Stop 13 · What-if? Scenarios: digital stress test

Act 4 · Prove it works (What-if)

Click path	Left nav → What-if? Scenarios → Create What-if? Scenario (show Duration and Impacts) → exit → open a scenario marked * → Recovery Threshold Breaches → Recovery Gaps tab → Tasks tab
What Sara sees	Simulated disruption against live data. Tables list every MTPD, RTO and RPO breached for the chosen duration. Recovery Gaps lists missing strategies and RTO longer than MTPD.
Say this (one line)	"A tabletop takes a month to organise. This takes ten seconds."
Proof point to land	Pick a 48 hour data centre outage and show which P1 operations break.

Field tip

Scenario to pick by buyer. UAE bank: core banking data centre outage. Energy: cyber attack on OT. Government: e-services portal outage during peak period. Qatar or KSA: extreme heat or sandstorm closing a site.

SCREENSHOT 13 · What-if? Scenarios: digital stress test

*Capture: Recovery Threshold Breaches table on a * scenario.*

Stop 14 · Analytics

Act 5 · Run and report the programme

Click path	Left nav → Analytics
What Sara sees	Trend charts across the BCM programme.
Say this (one line)	"Program Status shows what is happening now. Analytics shows why, over time."
Proof point to land	One chart you can say a board would ask for, such as P1 operations by readiness.

SCREENSHOT 14 · Analytics

Capture: Analytics dashboard with populated charts.

Stop 15 · Centralised Task Management

Act 5 · Run and report the programme

Click path	Left nav → Tasks
What Sara sees	Every outstanding task across BIAs, plans and scenarios by status, priority and type.

Say this (one line)	"Who owes what, live. Reminders are already sent."
Proof point to land	Overdue tasks surfaced without anyone sending an email.

SCREENSHOT 15 · Centralised Task Management

Capture: Tasks dashboard with status and priority breakdown.

Stop 16 · Registers and the Risk link

Act 5 · Run and report the programme

Click path	Left nav → Registers → Resources → Equipment (or Vendors) → Left nav → Risks → open Cyber Breach
What Sara sees	Validated central lists, dependency counts by P1 and P2, and a risk showing every operation it touches.
Say this (one line)	"Risk and BCM in one database. Each risk shows its operational blast radius."
Proof point to land	Cyber Breach risk lists the Business Operations exposed to it.

Field tip

Vendor story. Show vendors such as SAP, AWS and Microsoft linked to operations. Do not demo questionnaires, keep it to register plus linked activities.

SCREENSHOT 16 · Registers and the Risk link

Capture: Cyber Breach risk record listing linked Business Operations.

Stop 17 · Profile based views and close

Act 6 · Everyone sees what matters

Click path	Profile selector → BC Executive → BC Champion → back to BC Manager → Home → Program Status
What Sara sees	Executive gets the summary, the Champion sees only their Organisational Unit data.
Say this (one line)	"Same data, different lens for each role."
Proof point to land	Champion view filtered to one unit. Then close on Program Status.

Talk track

- **Closing line.** "Noggin moves you from compliance to capability. Your BCP stops being a PDF and becomes live resilience."

SCREENSHOT 17 · Profile based views and close

Capture: BC Champion home page filtered to one Organisational Unit.

5. Run Sheets by Time Slot

Slot	Stops to show	Skip or mention verbally
20 minutes (executive)	1, 2, 4, 5, 8, 11, 13, 17	Plan detail, Version Tracking, Analytics, Registers
30 minutes (standard)	1 to 5, 8, 9, 11, 13, 16, 17	Stop 6 tabs, Stop 7 and 10 approvals (say once: "same approval engine everywhere")
45 minutes (deep BCM)	All 17	Nothing. Add a short Q&A after Acts 2 and 4.

Pacing rule. Pause after each act and ask, "How do you handle this today?" The answer tells you which act to stretch.

6. Tailor It to the Room

Regulatory hooks by market

Market	Name these references	Where to land it in the demo
UAE government and semi-government	NCEMA 7000:2021 BCM Standard, ISO 22301:2019	BIA method (Stop 3), BCP generation and Version Tracking as audit evidence (Stops 11, 12)
UAE banks	CBUAE operational risk and BCM expectations, NCEMA 7000:2021	Business Priority and RTO breach (Stop 4), What-if (Stop 13), OpsRes profiles
ADGM firms	FSRA rules on business continuity and operational resilience	Profile views for the Executive (Stop 17), approval trail (Stops 7, 12)
KSA banks	SAMA Business Continuity Management Framework	Annual reassessment and Overdue escalation (Stops 7, 10, 12), What-if testing
Qatar	QCB requirements for banks; ISO 22301 for energy and shipping	Dependencies and vendor links (Stops 10, 16)
Oman (e.g. OHB)	CBO business continuity requirements, ISO 22301	BIA to BCP roll up (Stops 3 to 11). Be ready on data residency.

Verify before quoting

Confirm the exact regulation title and clause with the client's compliance team before putting it on a slide or in an RFP answer. Use the names above as conversation hooks, not citations.

What we learned in past BCM and GRC meetings

Engagement	What the room cared about	How to use this flow
OHB (Oman, BCM and OpsRisk)	BCM plus operational risk in one tool; data residency (AWS UAE vs Oman) and government tender process	Run the 45 minute flow and add Stop 16 risk links. Answer residency directly, do not avoid it.
Nakilat (Qatar, GRC POC)	Business unit roll up, calculated financial exposure, treatment tracking	When BCM comes up, link Stop 16 (risk blast radius) and Stop 8 (enterprise roll up). Multi-dimensional impact scoring is Phase 2 scope.
Demomaster BC module workstream	New BC module with industry seed data	Use seeded BIAs, plans and activities per industry. Additive only, never edit another consultant's records.
Prior BCM trial, vendor story	Vendors linked to risks, incidents and BCM activities	Show the vendor register and linked operations. Skip questionnaires.
AlexBank (Egypt, early discovery)	Non-specialist banking contact	Use the 20 minute flow and the five proof moments. Keep terminology light.

7. Objections and Competitive Lines

They say	You say
"We already do BIAs in Excel."	"Excel holds the numbers. It cannot tell you when an RTO breaks the MTPD, or that a BIA went stale. Noggin does both automatically."
"Archer or ServiceNow already has a BCM module."	"Here BCM, risk, incidents and vendors sit on one data model, with no separate module to license. The What-if test runs on that same live data."
"Our departments will not use another tool."	"They see one task list and a guided form with help text. Show them the Champion view."
"Auditors want documents, not dashboards."	"Every approved BCP is frozen as a PDF in Version Tracking. You get live data and a fixed audit trail."
"Can it do multi-dimensional impact scoring?"	"Impact is assessed across financial, reputational and operational categories today. Extra dimensions are configured during implementation."

Bottom line for sales. Sell live resilience, not a document library. Every stop should show data updating itself.

8. Screenshot Capture List

Capture each item on the regional demo site as BC Manager, then paste it into the matching frame in Section 4.

#	Stop	What to capture
01	Home and Program Status	Program Status tab with a red flag
02	BIA Global Dashboard	Three status widgets populated
03	BIA Workspace	Operations list and BIA Guide
04	Business Operation Guide	Recovery Requirements with MTPD and P1
05	Gap Analysis	Vulnerable plus risk acceptance question
06	Operation dashboard	Relationships dependency visual
07	BIA approval	Send BIA for Approval button
08	Business Operations Register	Filtered to P1
09	Plan Register	Plan Execution tab
10	Plan workspace	Dependencies tab
11	BCP roll up	Create BCP Scope options
12	BCP Version Tracking	Approved PDF entry
13	What-if Scenarios	Recovery Threshold Breaches table
14	Analytics	Populated charts
15	Tasks	Status and priority breakdown
16	Registers and Risks	Cyber Breach linked operations
17	Profile views	Champion view filtered by unit
